**CONNECTION & OPERATIONAL DIAGRAMS**

**TYPE : JVM-1 & JVM-3 ( Phase failure / Phase sequence monitoring relay )**

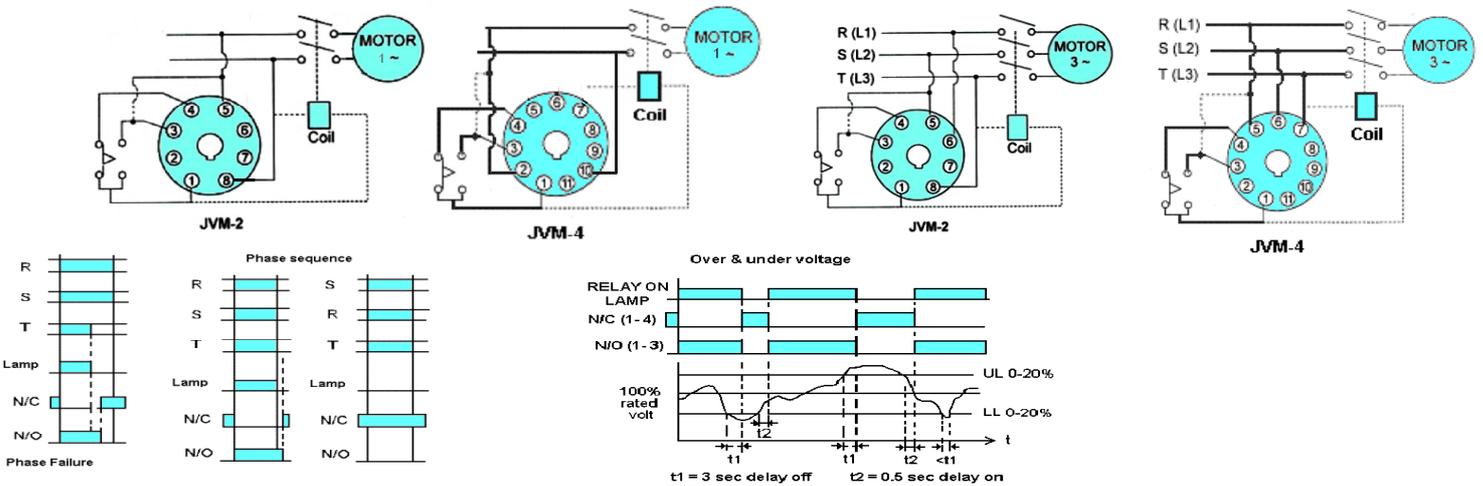

Output relay will be switched to ON ( pin#1 & pin#3 close ) immediately when power is applied to the unit with correct phase sequence and voltages  
 In case of any phase failure or voltage drops below 70% of the rated voltage and lasts for 3 seconds, then the output relay will return to its original position ( pin#1 & pin#4 close ) to cut power until 3 phase voltage and phase sequence are correct.

**TYPE : JVM-2 & JVM-4 ( Phase failure / Phase sequence / Under volt. monitoring relay )**

**A . Single phase**

**B . Three phase**

Output relay will operate to ON ( pin#1 & pin#3 close ) when power is applied to the unit normally, and simultaneously detect if supplied power voltages ( single or three phase ) are within the set vlotage range, and phase in correct sequence for three phase type.  
 0% to 20% Knob-adjustable separately for over voltage and under voltage. If voltage is over or under than the setting voltage for over 3 second, then the output relay will be released to its original position ( pin#1 & pin#4 close ).
